Summary

Took up a vocational course, learned basic knowledge about software or IT stuff. Craved for more knowledge and continue to study and finished my Bachelor of Science in IT. Started working on my first hard coded online application form, learned frameworks with my colleagues, learned more logical solutions to cater user's needs.

After all those years of hard works, time spent to self-study new technology. I am here with 7 years of experience in Content Management System (CMS). Full-stack Developer and Database Manager equipped with the following technologies: CodeIgniter 4 (CI), Laravel 7, Bootstrap 5, jQuery, Vue.js, Flowbite, Tailwind CSS, Node.js, Xampp (PHP 7), HTML 5, CSS 3, Github. Linux/Ubuntu terminal commands also helps to manage my files in production servers.

Being a Full-stack Developer is like a One Man Team task but after saving that one last line of code (Ctrl + S), one hard refresh (Ctrl + F5) and no error/s. Call it a day!

Experience

Computer Programmer III

National Research Council of the Philippines

Jun 2017 - Present (5 years 9 months)

- Designs and develops the required databases, performs data migration
- Analyzes, defines and writes documentations of the requirements for data flow, workflow, logical process, hardware, operating system and other requirements of the systems
